

# Unlock the Power of Real-Time Data & Insights

Boost Business Performance with Breakthrough Technology

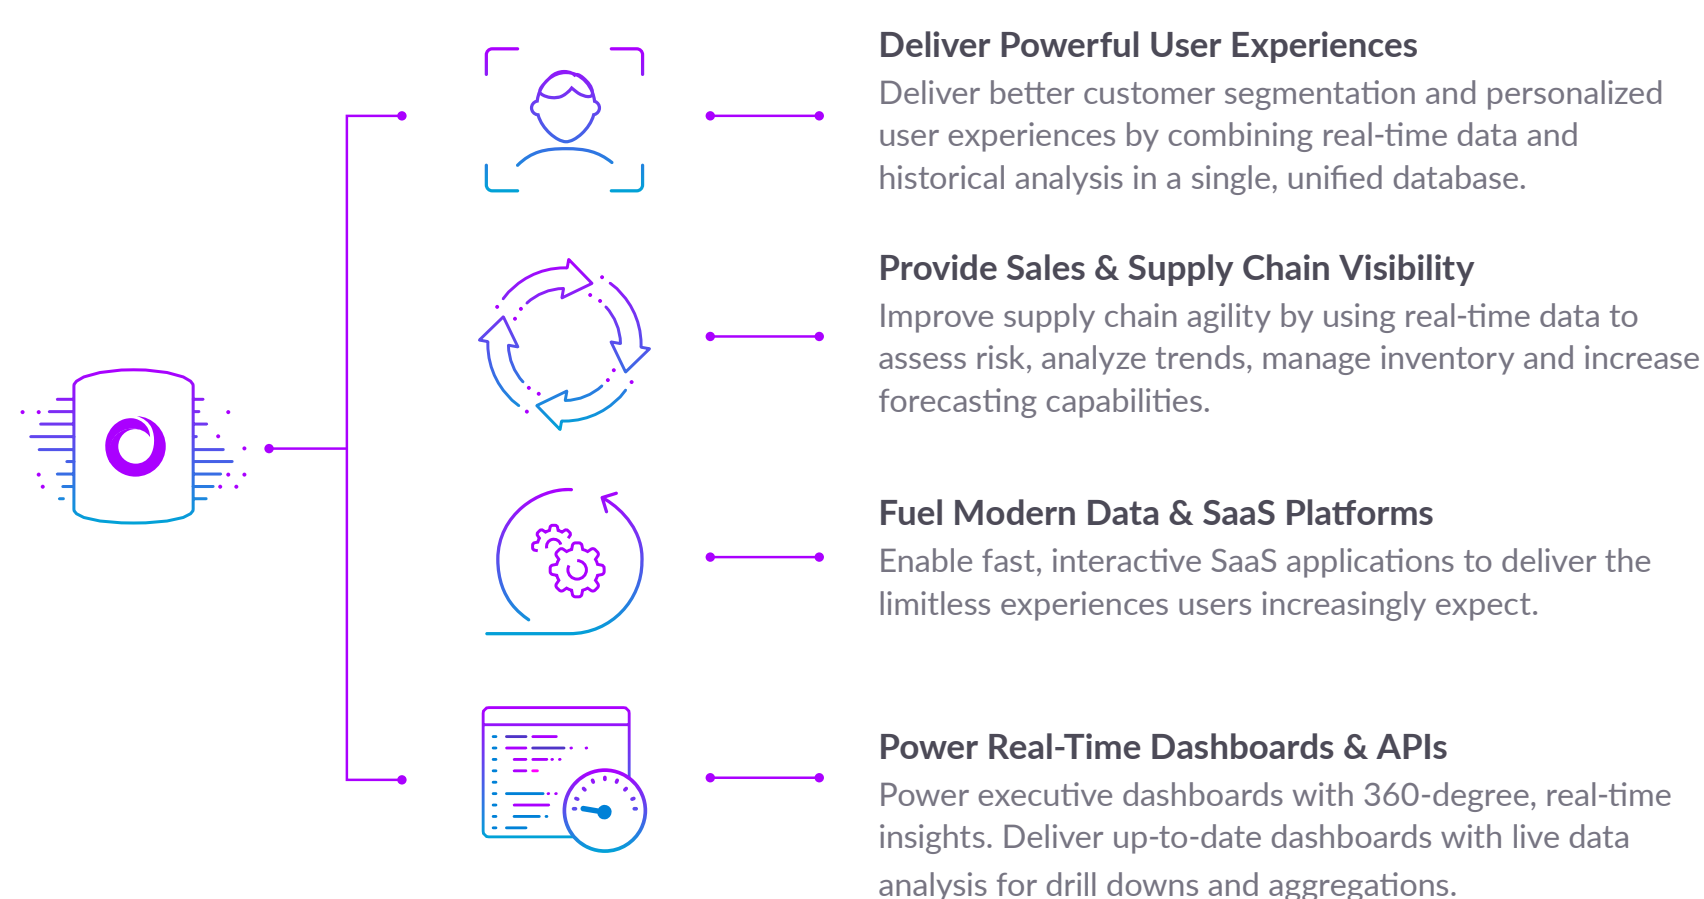

## High Tech Enterprises Require a Modern Data Infrastructure

To stay competitive in today's rapidly evolving high-tech industry, enterprises need to be able to collect real-time data and transform it into immediate insights to make better business decisions, and power fast, personalized experiences for customers and partners.

Yet some businesses are unable to innovate, constrained by antiquated data architectures, rising costs and complexities and a lack of IT resources.

Today's most innovative use cases in high tech require a modern data infrastructure that not only delivers the speed and scale enterprises need to fuel their applications and SaaS platforms, but also the operational flexibility they need to:

## SingleStoreDB Powers Data-Driven Innovation in High Tech Enterprises

### The One Database for All Data-Intensive Applications

SingleStoreDB is a real-time distributed SQL database that combines transactions and analytics in one powerful engine, delivering the ultra-fast queries needed for limitless, breakthrough experiences.

With SingleStoreDB, high-tech enterprises can drive fast analytics on all data and serve real-time, actionable insights — across internal and external applications, dashboards and platforms.

**100x**  
Improvement in performance

**50%**  
Reduction in TCO compared to alternate data stacks

SingleStoreDB powers data platforms and real-time analytics for tech leaders around the globe and 100+ of the leading SaaS application providers across fintech, adtech, martech and cybertech segments.

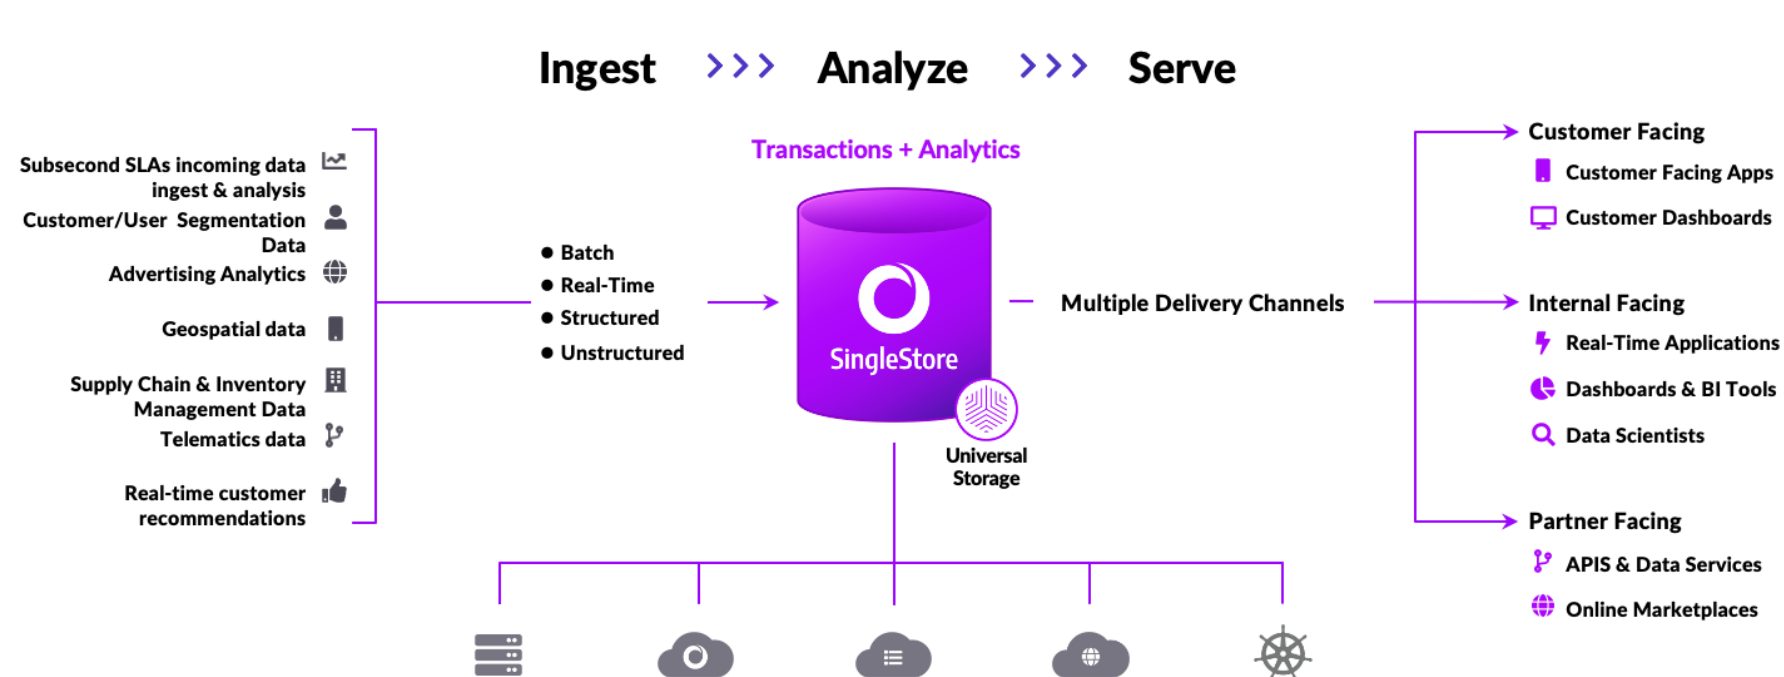

## Powering Real-Time Use Cases for Industry Leaders & Disruptors

Customer experience analytics	Uber	DELL Technologies	SIEMENS
Modern SaaS Applications	SAMSUNG	((Siriusxm)) SATELLITE RADIO	Akamai
Supply chain monitoring & analytics	ARMIS.	iex cloud	Ssas
Sales / inventory management	paloalto NETWORKS	Sony Interactive Entertainment	NBCUniversal
Dashboards & APIs			

## Turbocharge Your Apps & Analytics

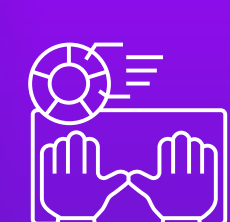

### Achieve Fast Event-to-Insight Performance

SingleStoreDB meets the toughest SLAs using distributed, lock-free ingestion and real-time query processing.

## Key Capabilities

SingleStoreDB delivers fast analytics on dynamic data for complex queries.

### Ultra-Fast Ingest

Parallel, high-scale streaming data ingest handles millions of events / second with immediate availability

### Super-Low Latency

Blazing fast queries deliver sub-second latencies with immediate consistency

### High Concurrency

Unparalleled scalability enables millions of real-time queries across tens of thousands of users

## SingleStoreDB Powers High Tech

### Case Studies

Category	Challenges	Result
 Top Technology Hardware Provider	Slow system leads to data disconnect	Went from 30-minute delayed reports to near-real-time reporting →
 Top Video Game & Digital Entertainment Company	Sluggish performance	Consolidated data stores and delivered 100x performance improvement →
 Mobility-as-a-Service	Unable to fast ingest and operationalize data	Generated 24/7 real-time analytics on 1,000s of concurrent riders and drivers →
